

What is SD 90+?

(EnviroShield ENDURE)

SD 90+ is clear, ready to use spray-on coating that, when properly applied, bonds to a surface at the molecular level, leaving a protected antimicrobial coating on the surface that can last for up to a year. This “self cleaning” coating continuously controls surface damaging and odor causing bacteria, fungi, algae and mold by ***physically disrupting*** the target organism through the EPA registered antimicrobial active ingredient (***DTN 100 Antimicrobial, cas no 27668-52-6***) in the product.

SD 90+ is currently considered a Treated Article by the US EPA and is registered as a long lasting disinfectant in several international markets.
